Phlebotomist/Phlebotomy Technician

Phlebotomists are specially trained to draw blood samples needed for laboratory testing. They must create an atmosphere of trust and confidence while skillfully collecting

blood specimens in a safe and reliable manner. In addition to collecting specimens, they maintain collection areas and equipment and perform record keeping duties.

Phlebotomist Facts:

Where do phlebotomists work in Alaska?

Phlebotomists work in medical laboratories in hospitals, for-profit laboratories, clinics, nursing homes, public health facilities, and associated healthcare industries. In rural Alaska, phlebotomists are employed in hospitals, subregional clinics, physician's offices, and other medical laboratory settings.
